1.Missing the Big Picture	5.The Global Pay for Plasma Paradox	5.AVAILABLE SOLUTIONS(A S)
As I shared in a recent blog post, 'The Sky Isn't Falling, But the World Needs More Plasma,' members of our community are facing barriers to accessing the lifesaving therapies that many of us need to take for the rest of our lives. The reason? The demand for these therapies continues to outpace the collection and fractionation of source plasma.	For those who are unaware, most other countries throughout the world don't want to be seen as "paying for plasma." Many nations do, however, compensate their donors with non-monetary gifts.	CNN to identify the hand gestures. AI to communicate with gesture and voice Flask to develop application.
2. Donors Are and Should Be Compensated —For Their Time	6.Focus on Finding Solutions	7. BEHAVIOUR(B E)
Source plasma is collected at highly-regulated standalone centers, as opposed to whole blood donations, which can be collected anywhere. Plasma collection is more invasive than whole blood collection, and one-time donations can't be used—you have to donate a second time.	Unfortunately, some of the loudest voices on this topic are folks who are pursuing narratives rather than grappling with a complex, multi-faceted issue and working to finding solutions.	Searching the medium to express the feelings. Searching a device to get translate.

3. TRIGGERS(T M)	4. YOUR SOLUTION(S L)	8.CHANNELS OF BEHAVIOUR (CH)
